Half a Century Milestone – ESB Legacy

The logo is rendered in threads of royal colours, symbolizing prestige and innovation, and reflecting how ESB members weave foundational ideas into practical applications. The five gold stars on the right represent the five foundational pillars of biomaterials science: materials science, chemistry, engineering, biology, and manufacturing. Altogether, the design highlights ESB's European identity and its dedication to fostering collaboration across Europe's scientific community and beyond, reaching scholars and innovators throughout the Americas, Asia, Africa, and Australia. Meanwhile, the vertically emphasized ESB acronym reinforces the organization's enduring identity and unity.
